

Rep. Curtis J. Tarver, II

Filed: 4/8/2025

10400HB3349ham001

LRB104 10938 AAS 25172 a

1 AMENDMENT TO HOUSE BILL 3349

2 AMENDMENT NO. _____. Amend House Bill 3349 by replacing
3 everything after the enacting clause with the following:

4 "Section 1. Short title. This Act may be cited as the
5 Powering Up Illinois Act.

6 Section 5. Definitions. As used in this Act:

7 "Commission" means the Illinois Commerce Commission.

8 "Electric utility" means an electric utility serving more
9 than 500,000 customers in this State.

10 "Electrification" means any new use of electricity,
11 expanded use of electricity, or change in use of electricity,
12 including, but not limited to, any change in the use of
13 electricity in the industrial, commercial, agricultural,
14 housing, or transportation sectors that is associated with
15 changes in consumption or demand related to conversion of
16 equipment from a fossil fuel source to an electric fuel

1 source.

2 "Energization" and "energize" means the connection of new
3 customers to the electrical grid, the establishment of
4 adequate electrical capacity to provide service for a new
5 customer, or upgrading electrical capacity to provide adequate
6 service to an existing customer for the purpose of
7 electrification. "Energization" and "energize" do not include
8 activities related to connecting electricity supply resources.

9 "Energization time period" means the period of time that
10 begins when the electric utility receives a substantially
11 complete energization project application and ends when the
12 electric service associated with the project is installed and
13 energized, consistent with the service obligations set forth
14 in the Public Utilities Act.

15 Section 10. Findings. The General Assembly finds the
16 following:

17 (1) It is the policy of the State to increase the
18 amount of electric vehicles used in the State to 1,000,000
19 by 2030. That expanded infrastructure investment will help
20 Illinois more rapidly decarbonize the transportation
21 sector. Widespread use of electric vehicles and charging
22 equipment has the potential to provide customers with fuel
23 cost savings and provide electric utility customers with
24 cost-saving benefits. Widespread use of electric vehicles
25 stimulates innovation, competition, and increased choices

1 in charging equipment and networks, attracts private
2 capital investments to the State, and creates high-quality
3 jobs in the State. Accelerating the adoption of electric
4 vehicles will drive the decarbonization of the States'
5 transportation sector. To meet these goals and federal,
6 State, regional, and local air quality and decarbonization
7 standards, plans, and regulations, a large increase in
8 both the quantity of electricity used and the functions
9 for which electricity will be used is needed.

10 (2) To meet these decarbonization goals as well as
11 federal, State, regional, and local air quality and
12 decarbonization standards, plans, and regulations, the
13 following must occur:

14 (A) the State's electrical distribution systems
15 must be substantially upgraded;

16 (B) new customers must promptly connect to the
17 electrical distribution system; and

18 (C) existing customers must have the customer's
19 service level promptly upgraded.

20 (3) There are many reports throughout the country of
21 individual customers who are unable to have their
22 electrical service promptly upgraded or energized and
23 charging stations for light-duty, medium-duty, and
24 heavy-duty vehicles and off-road vehicles, vessels,
25 trains, and equipment that are unable to be energized
26 promptly. These delays may inhibit the State's ability to

1 meet its decarbonization goals and federal, State,
2 regional, and local air quality and decarbonization
3 standards, plans, and regulations.

4 (4) To improve the speed at which energization and
5 service upgrades are performed, electric utilities that
6 distribute electricity need to do both of the following:

7 (A) accelerate the utility's advance planning,
8 engineering, and construction of increased
9 distribution and transmission system capacity; and

10 (B) advance order transformers, switchgear, and
11 other needed equipment to support acceleration of
12 activities in subparagraph (A).

13 (5) Electrifying transportation and buildings can put
14 downward pressure on rates by spreading fixed costs over
15 more kilowatt-hours of usage.

16 (6) Delays in energization, including service
17 upgrades, are costly both to the customers awaiting
18 service and to other customers who are deprived of the
19 downward pressure on rates.

20 (7) To carry out the planning, engineering, and
21 construction of electrical distribution systems needed to
22 promptly serve customers, electric utilities that
23 distribute electricity need to recruit, train, and retain
24 an adequately sized, qualified workforce.

25 (8) The Illinois Commerce Commission needs to
26 establish target deadlines for utilities that distribute

1 electricity to energize new customers and upgrade the
2 service of existing customers.

3 (9) The Illinois Commerce Commission shall establish
4 target energization time periods for electric distribution
5 utilities and shall establish associated reporting
6 requirements.

7 Section 15. Electrical distribution system upgrades. To
8 fulfill the service obligations specified in the Public
9 Utilities Act, an electric distribution utility shall:

10 (1) prepare, maintain, and upgrade its electrical
11 distribution system as needed and in time to allow for the
12 achievement of federal, State, regional, and local air
13 quality and decarbonization standards, plans, and
14 regulations;

15 (2) conduct sufficient advance planning, engineering,
16 and construction of increased distribution of system
17 capacity by advance ordering transformers and other needed
18 equipment so that customers can be energized without
19 substantial delay;

20 (3) promptly energize new customers in a manner
21 consistent with the Public Utilities Act, including by
22 ensuring that new housing, new businesses, and new
23 charging for light-duty, medium-duty, and heavy-duty
24 vehicles and off-road vehicles, vessels, trains, and
25 equipment can be used without delay;

1 (4) promptly upgrade service when needed by customers;

2 (5) if not already an option, allow customers seeking
3 energization to choose an optional flexible
4 interconnection or dynamic hosting capacity option, which
5 shall provide a voluntary utility offering by which
6 customers agree to specified service levels as a
7 requirement of energization through the use of demand
8 response technology that limits the net import and export
9 of electricity at the point of common coupling to remain
10 within the rated capacity limits of a customer's existing
11 service connection or distribution circuit, either on a
12 permanent basis or to allow for immediate project
13 operations before service or distribution system upgrades
14 are completed;

15 (6) plan for and propose timely investments in secure,
16 resilient, high-bandwidth, and low-latency communications
17 systems as needed to support the achievement of the
18 federal, State, regional, and local air quality and
19 decarbonization standards, plans, and regulations
20 referenced in paragraph (1) of this Section and the
21 flexible interconnection or dynamic hosting capacity
22 options referenced in paragraph (5) of this Section; and

23 (7) recruit, train, and retain an adequately sized and
24 qualified workforce to carry out the planning,
25 engineering, and construction of electrical distribution
26 systems needed to promptly serve customers seeking

1 energization and service upgrades without sacrificing
2 other necessary activities of the workforce.

3 Section 20. Commission requirements.

4 (a) Within 180 days after the effective date of this Act,
5 the Commission shall adopt rules as follows:

6 (1) Rules that establish reasonable average and
7 maximum target energization time periods for categories of
8 energization requests. The targets shall ensure that work
9 results in safe, adequate, and reliable service while
10 minimizing delays in meeting the date requested by the
11 customer for completion of the project to the greatest
12 extent possible and prioritizes work in a manner
13 consistent with Sections 25 and 30. The targets may vary
14 depending on the complexity and magnitude of the work
15 required and uncertainties regarding the readiness of the
16 customer project needing energization. The targets may
17 also recognize any factors beyond the electric utility's
18 control and provide for adjustment upon a showing of such
19 factors.

20 (2) Rules that require an electric distribution
21 utility to report to the Commission, at least annually,
22 its performance in meeting energization targets
23 established pursuant to paragraph (1) of this subsection
24 (a) in order to track and improve electric utility
25 performance. The report shall include the average, median,

1 and standard deviation time between receiving an
2 application for energization, explanations for
3 energization time periods that exceed the target maximum
4 for energization requests, and constraints and obstacles
5 to each category of energization request, including, but
6 not limited to, funding limitations, qualified staffing
7 availability, equipment availability, and any other
8 information requested by the Commission. The report may be
9 filed in conjunction with or as part of other applicable
10 reports already required by the Commission.

11 (b) If energization time periods exceed the Commission's
12 target averages or if the electric utility has a substantial
13 number of energization projects that exceed the Commission's
14 target maximums, the electric utility shall include in its
15 report pursuant to rules adopted under paragraph (2) of
16 subsection (a) a strategy for meeting the targets in the
17 future. The Commission may request modification of the
18 electric utility's strategy to ensure that the electric
19 utility meets targets promptly and consistent with the
20 policies set forth in Section 25.

21 (c) Data reported by electric utilities shall be
22 anonymized or aggregated to the extent necessary to prevent
23 identifying individual customers. The Commission shall require
24 all reports to be publicly available.

25 (d) The Commission shall require the electric utility to
26 take any remedial actions necessary to achieve the

1 Commission's targets.

2 Section 25. Electrification team; staffing.

3 (a) The Commission shall require each electric
4 distribution utility to establish or identify a dedicated
5 electrification team that shall, at a minimum, do the
6 following:

7 (1) serve as a single point of contact for customers
8 throughout the entire energization process;

9 (2) proactively engage with customers to understand
10 and support electrification plans; and

11 (3) provide customers with consolidated and
12 coordinated access to all beneficial electrification
13 customer programs, accounts, and relevant information to
14 support electrification and the energization process.

15 (b) The Commission shall require each electric utility to
16 have adequate qualified staffing needed for the
17 electrification team to achieve the policies and requirements
18 of this Act.

19 (c) For job classifications that have apprentice training
20 requirements, the Commission shall require each electric
21 utility to maintain a pipeline of apprentices sufficient to
22 meet future qualified staffing needs, subject to any
23 limitations based on safe staffing ratios.

24 (d) As part of each report required pursuant to rules
25 adopted under paragraph (2) of subsection (a) of Section 20,

1 and in each general rate case application, each electric
2 utility shall include a detailed analysis of its current
3 qualified staffing level and future required qualified
4 staffing level for each job classification needed to achieve
5 the policies and requirements of this Act.

6 Section 30. Electric utility requirements. The Commission
7 shall require an electric distribution utility to do the
8 following:

9 (1) consider, in its internal distribution planning
10 process and in the development of the Multi-Year
11 Integrated Grid Plans required by Section 16-105.17 of the
12 Public Utilities Act, all of the following:

13 (A) federal, State, regional, and local air
14 quality and decarbonization standards, plans, and
15 regulations to the extent known to the utility and to
16 the extent such standards, plans, and regulations
17 affect the electric utility's operations;

18 (B) the effects of transportation and building
19 electrification policies of State law to the extent
20 known to the utility, and to the extent such policies
21 affect the utility's operations;

22 (C) the effects of State and municipal plans and
23 requirements related to housing, economic development,
24 critical facilities, transportation, and building
25 electrification to the extent known to the utility and

1 to the extent such plans and requirements affect the
2 utility's operations;

3 (2) consider the following in its distribution system
4 planning process:

5 (A) automated load management, managed charging,
6 and distributed energy resources to defer or mitigate
7 energization-related grid upgrades; and

8 (B) if the solutions identified in subparagraph
9 (A) cannot defer or mitigate an upgrade, the electric
10 utility shall evaluate traditional system upgrades
11 using the utility's non-wires alternative framework as
12 part of the utility's Multi-Integrated Grid Plan under
13 Section 16-105.17 of the Public Utilities Act; and

14 (3) submit modifications between the 4-year cycles
15 specified for the submission of the Multi-Year Integrated
16 Grid Plans required by Section 16-105.17 of the Public
17 Utilities Act as needed to comply with the energization
18 time periods established under paragraph (1) of subsection
19 (a) of Section 20 and to accommodate the load growth
20 necessary to implement the laws, standards, plans, and
21 regulations described in subparagraphs (A), (B), and (C)
22 of paragraph (1).

23 Section 35. Recovery of costs. The Commission shall ensure
24 that electric utilities have sufficient and timely recovery of
25 costs to be consistent with the findings and achieve the

1 policies and requirements of this Act and Section 16-105.17 of
2 the Public Utilities Act. Electric utilities shall recover
3 Commission-approved costs associated with the implementation
4 of this Section in Commission-approved distribution rates
5 under either Section 9-201 or Section 16-108.18 of the Public
6 Utilities Act.

7 Section 40. Safety. To ensure the safety and reliability
8 of electrical infrastructure associated with charging electric
9 vehicles:

10 (1) The Commission, Environmental Protection Agency,
11 and Department of Transportation shall require that all
12 electric vehicle charging infrastructure and equipment
13 located on the customer side of the electrical meter that
14 is funded or authorized, in whole or in part, by those
15 State entities shall be installed by a licensed, bonded,
16 and insured electrical contractor registered in the
17 municipality where work is to be performed, and who has at
18 least one electrician on each crew, at any given time, who
19 holds an Electric Vehicle Infrastructure Training Program
20 certification.

21 (2) The Commission, Environmental Protection Agency,
22 and Department of Transportation shall require the
23 projects that are funded or authorized, in whole or in
24 part, by those State entities and that install a charging
25 port supplying 25 kilowatts or more to a vehicle to have at

1 least 25% of the total electricians working on the crew
2 for the project, at any given time, hold an Electric
3 Vehicle Infrastructure Training Program certification.

4 (3) One member of each crew may be both the contractor
5 and an electrician certified by Electric Vehicle
6 Infrastructure Training Program.

7 (4) Paragraph (1) does not apply to the following:

8 (A) electric vehicle charging infrastructure
9 installed by employees of an electric utility or local
10 publicly owned electric utility; or

11 (B) single-family home residential electric
12 vehicle chargers.

13 (5) An electrical apprenticeship program registered
14 with United States Department of Labor that provides
15 training to apprentices and continuing education to
16 journey-level workers may provide Electric Vehicle
17 Infrastructure Training Program training with the
18 apprenticeship program's own instructors certified by an
19 Electric Vehicle Infrastructure Training Program. The
20 Electric Vehicle Infrastructure Training Program
21 certification exam shall be administered by the Electric
22 Vehicle Infrastructure Training Program.

23 Section 99. Effective date. This Act takes effect upon
24 becoming law."
