

SB3580

104TH GENERAL ASSEMBLY

State of Illinois

2025 and 2026

SB3580

Introduced 2/5/2026, by Sen. Jil Tracy

SYNOPSIS AS INTRODUCED:

New Act

Creates the Illinois Regional Generation Reliability Task Force Act. Sets forth findings of the General Assembly. Creates the Illinois Regional Generation Reliability Task Force. Provides that the Task Force shall monitor the reliability of the Illinois power grid. Contains provisions concerning: the membership of the Task Force; duties of the Task Force; administrative support; and an annual report. Effective immediately.

LRB104 17221 BDA 30642 b

A BILL FOR

1 AN ACT concerning State government.

2 **Be it enacted by the People of the State of Illinois,**
3 **represented in the General Assembly:**

4 Section 1. Short title. This Act may be cited as the
5 Illinois Regional Generation Reliability Task Force Act.

6 Section 5. Findings. The General Assembly hereby finds,
7 determines, and declares the following:

8 (1) The reliability of the electricity grid of the
9 State is critically important to the consumers,
10 businesses, and residents of this State and should not be
11 compromised.

12 (2) The State has taken definitive steps toward
13 redefining the generation mix in this State.

14 (3) The Midcontinent Independent System Operator, Inc.
15 ("MISO") is an independent, not-for-profit, member-based
16 organization responsible for operating the power grid
17 across 15 states and the Canadian province of Manitoba,
18 serving 42 million people.

19 (4) The PJM Interconnection LLC ("PJM"), is an
20 independent not-for-profit, member-based Regional
21 Transmission Organization ("RTO") that manages the
22 operations, supply, and movement of power across 13 states
23 and the District of Columbia, serving 65 million people.

1 (5) The State is served by both PJM and MISO, which
2 collectively ensure that sufficient electric power
3 generation supply and transmission are available to meet
4 electric demand every minute of every day for over 107
5 million people across 28 states and 2 countries. Wholesale
6 electric power generation is regulated by the Federal
7 Energy Regulatory Commission due to the interstate and
8 international nature of the transmission grid operated by
9 PJM and MISO. As such, policy changes at the State level
10 can affect the reliability, availability, and cost of
11 power for seniors, families, businesses, municipalities,
12 universities, and hospitals across the region.

13 (6) When natural disasters occur, such as ice storms,
14 blizzards, tornadoes, and hurricanes, states participating
15 in PJM and MISO have provided support to each other
16 through power generation restoration missions. The
17 inability to deliver power generation in critical times
18 can have a huge economic impact and can also result in
19 death across the PJM and MISO regional transmission
20 organizations.

21 (7) PJM and MISO have multiple markets in which power
22 suppliers participate. The capacity market, day-ahead
23 energy market, and frequency market are markets that power
24 generators participate in to ensure over 107 million
25 people across 28 states and 2 countries receive the right
26 amount of electricity every minute of every day.

1 (A) Capacity markets are used in wholesale
2 electricity markets to pay resources for being
3 available to meet peak electricity demand. Capacity is
4 not actual electricity but rather the ability to
5 produce electricity when called upon. Capacity is
6 procured sometimes multiple years in advance of when
7 it is needed, based on projections of future energy
8 needs using historical demand requirements.

9 (B) The day-ahead energy market lets market
10 participants commit to buy or sell wholesale
11 electricity one day before the power is needed, to
12 help avoid price volatility. The real-time energy
13 market balances the differences between day-ahead
14 commitments and the actual real-time demand for and
15 production of electricity.

16 (C) The power grid operates, and shall be
17 maintained, at a constant frequency of 60 hertz.
18 Significant deviation from this level can result in
19 catastrophic damage to the power grid as well as
20 household appliances. Frequency is maintained when
21 electric generators automatically add or remove power
22 from the grid. For example, a large power plant
23 suddenly tripping offline reduces the total amount of
24 available kinetic energy, leading the rotating
25 generators on the system to start rotating less
26 rapidly and thereby decreasing the alternating current

1 frequency across the grid system. Since a generator
2 turbine's rotational velocity is directly coupled to
3 the grid frequency, the generator's control systems
4 can sense this frequency decline as an indicator of
5 insufficient energy provision. The control system
6 within each power plant, which usually has been in the
7 form of a governor, can then automatically increase
8 the plant's power output. This process is autonomous
9 because the governor does not have to wait for a
10 central dispatcher to send a signal, thus bypassing
11 communications system delays.

12 (8) The shifting generation mix in PJM and MISO will
13 require optimum performance and an increased focus on the
14 need to retain reliability as certain existing generators
15 shut down operations and new, intermittent generators are
16 added. Additionally, increased power generation
17 consumption due to increased electric vehicles and
18 charging stations, along with increased electrification of
19 building heating needs, will undoubtedly place greater
20 demand on the power system.

21 (9) The State has a responsibility to ensure that the
22 performance of State and regional power grids are safe,
23 reliable, and maintain the necessary capacity to meet the
24 power demands of residents of this State. Additionally,
25 the State has an obligation to do its part to ensure the
26 regional power grid is safe and reliable for its

1 partnering states. As part of the regional power grid,
2 this State should be concerned that shuttered facilities
3 in this State will be replaced by higher cost, higher
4 emissions resources from other states.

5 Section 10. Illinois Regional Generation Reliability Task
6 Force.

7 (a) The Illinois Regional Generation Reliability Task
8 Force is created. The Task Force shall monitor the reliability
9 of the power grid of this State. The Task Force should consider
10 the present and future needs of consumers of this State while
11 simultaneously addressing any issues related to the
12 performance and reliability of power generation and
13 transmission and being mindful of the ultimate cost to
14 consumers.

15 (b) The duties and responsibilities of the Task Force
16 include the following:

17 (1) identifying and assessing policies, rules, and
18 laws that have the potential to significantly affect the
19 reliability of the State and regional power grids;

20 (2) developing a set of standards and conditions that
21 will ensure optimal performance of the State and regional
22 power grids based on new and emerging technologies;

23 (3) identifying opportunities to improve the power
24 supply mix in this State through existing and new laws to
25 ensure continued power reliability at affordable rates for

1 consumers of this State;

2 (4) compiling research and best practices from other
3 states and countries on how to deploy technology to
4 benefit the performance and reliability of the power grid;

5 (5) developing tools to assess the impact of proposed
6 policies and evaluate their costs and benefits on
7 families, employers, the public, this State, and other
8 states as part of the State and regional power grids;

9 (6) identifying data, reports, and relevant
10 information on the performance of the power grid to ensure
11 reliability and that pricing of power generation is in the
12 best interest of families, businesses, and communities in
13 this State;

14 (7) providing its findings and recommendations for
15 policy changes and any revisions to policies, rules, and
16 laws that will facilitate the stability and reliability of
17 the State and regional power grids on an annual basis to
18 the General Assembly; and

19 (8) developing and proposing legislative concepts to
20 ensure the future stability and reliability of the power
21 grid.

22 Section 15. Membership; meetings.

23 (a) The members of the Illinois Regional Generation
24 Reliability Task Force shall be composed of the following:

25 (1) three Senators appointed by the President of the

1 Senate, one of whom shall be designated by the President
2 as the co-chair of the Task Force;

3 (2) three Representatives appointed by the Speaker of
4 the House of Representatives, one of whom shall be
5 designated by the Speaker as the co-chair of the Task
6 Force;

7 (3) three Senators appointed by the Minority Leader of
8 the Senate;

9 (4) three Representatives appointed by the Minority
10 Leader of the House of Representatives;

11 (5) one member appointed by the Governor whose sole
12 role is dedicated to energy policy for the State;

13 (6) one member of a State or local labor organization
14 appointed by the President of the Senate;

15 (7) one member of a State or local labor organization
16 appointed by the Speaker of the House of Representatives;

17 (8) one representative from PJM RTO, designated by
18 PJM;

19 (9) one representative from the PJM Independent Market
20 Monitor organization, designated by the PJM Independent
21 Market Monitor organization;

22 (10) one representative from MISO RTO, designated by
23 MISO;

24 (11) one representative from the MISO Independent
25 Market Monitor organization, designated by the MISO
26 Independent Market Monitor organization;

1 (12) six representatives from 6 different power
2 generation companies that operate in the PJM or MISO
3 regional transmission organization, 2 appointed by the
4 President of the Senate, 2 appointed by the Speaker of the
5 House of Representatives, one appointed by the Minority
6 Leader in the Senate, and one appointed by the Minority
7 Leader in the House of Representatives;

8 (13) one representative from a statewide organization
9 representing retail merchants, appointed by the President
10 of the Senate;

11 (14) one representative from a statewide organization
12 representing manufacturers, appointed by the Speaker of
13 the House of Representatives;

14 (15) one representative from a statewide organization
15 representing retired people, appointed by the Speaker of
16 the House of Representatives;

17 (16) one representative from a minority-owned
18 geothermal group, appointed by the President of the
19 Senate;

20 (17) one representative from a statewide organization
21 representing business, appointed by the Speaker of the
22 House of Representatives;

23 (18) two representatives from environmental law
24 groups, one appointed by the President of the Senate and
25 one appointed by the Speaker of the House of
26 Representatives;

1 (19) the Director of the Illinois Power Agency, or the
2 Director's designee;

3 (20) the Director of the Environmental Protection
4 Agency, or the Director's designee; and

5 (21) the Chair of the Illinois Commerce Commission, or
6 the Chair's designee.

7 (b) Appointments for the Task Force shall be made by May 1,
8 2026. The Task Force shall hold 7 meetings annually, either
9 remotely or in person, and the first meeting shall be held
10 within 30 days after appointments are made.

11 (c) Members of the Task Force shall serve without
12 compensation.

13 (d) The Illinois Commerce Commission shall provide
14 administrative support to the Task Force in conjunction with
15 the independent market monitors for the MISO and PJM regional
16 transmission organizations.

17 Section 20. Annual report.

18 (a) The Illinois Regional Generation Reliability Task
19 Force shall issue an annual report based upon its findings in
20 the course of performing its duties and responsibilities. The
21 report shall be written by the administrative staff of the
22 Task Force and with staff assistance from the independent
23 market monitors from the MISO and PJM regional transmission
24 organizations.

25 (b) The Illinois Regional Generation Reliability Task

1 Force shall submit its first report on October 1, 2026, and
2 each October 1 thereafter to the General Assembly upon the
3 completion of its meeting schedule and shall continue to issue
4 reports each year.

5 Section 99. Effective date. This Act takes effect upon
6 becoming law.
